

Requirement details are:

- A key grading point is that the page is rendered in different scales as the browser window size changes. The smallest window width for grading will be 320px.
- Header at the top with title centered vertically and horizontally inside.
- The profile picture should be round and have round border. Your name must be rendered below the picture and center-aligned as you see in the sample image above.
- For each list item, the description and the screenshot image should be side by side even if the page dimension changes.
- The list numbers must be rendered outside the corresponding list item description. Notice that 'Project Name Here' is aligned with the description but the item number is rendered left side of the project name.
- You should use at least three different fonts. For the page title, use the Google font 'Poiret One', and 'Open Sans' for the project description.
- Social media icons should be links. Use four icons and make sure they are rendered in 2 rows and 2 columns -- you can use a table or use nested `divs`. The first row should be rendered inside the header area. Each icon should be linked to a page. Each icon is not an image. You have to use text icons from Font Awesome (<https://fontawesome.com>). You may use `fab` style prefix for free icons.
- The area marked red in the figure below is sample spacing used in the completed version.

- Feel free to use a background image for your portfolio. Make the background cover entire page. You will also choose the background color of the title area to make it fit better with the background image.

Hints

- Considering using nested div elements. You can set the width of the outer div element and set the width of the inner div element as percentage.
- Use the Box model for spacing.
